

JOE HARRISON

Senior Full Stack Developer

Abbots Langley, London

07427 113200

joe@joescript.io

joescript.io | [GitHub](https://github.com)

Senior full-stack developer working mainly with TypeScript, React and AWS. Main technical owner for Dianomi's advertiser self-service platform, covering its front end, serverless APIs and legacy Perl integrations. Joined as a junior developer in 2021 and progressed to senior, with responsibility for technical design, code review and mentoring two developers in a seven-person engineering team.

CORE SKILLS

Front end: TypeScript, React, React Router data APIs, TanStack Query, Vitest, Playwright

Backend: Node.js, Hono, Drizzle ORM, REST APIs, Perl, MySQL

Cloud and IaC: AWS CDK through SST v2, Lambda, API Gateway, SQS, S3, EventBridge, CloudWatch

Delivery: GitHub Actions, Cloudflare Pages and Functions, CI/CD, automated testing

Domain: Ad serving, campaign management, payments, invoicing, reporting, data pipelines

Leadership: System design, technical reviews, mentoring, hiring and interviewing

PROFESSIONAL EXPERIENCE

Dianomi | London

May 2021 - Present

Senior Developer Dec 2024 - Present | *JavaScript Developer* Oct 2021 - Dec 2024 | *Junior Front End Developer* May 2021 - Oct 2021

- Main technical owner for the advertiser self-service platform across React, TypeScript services and legacy Perl integrations. Work directly with around 10 account managers to investigate issues and turn recurring problems into product changes.
- Designed and built a serverless API using TypeScript, Hono and Drizzle ORM. Defined its AWS infrastructure in CDK through SST v2 across Lambda, API Gateway, CloudFront, S3, SQS and EventBridge.
- Rebuilt the reporting system around typed column definitions, per-client allow lists and parent/child account permissions. Used EXPLAIN ANALYZE, covering indexes and narrower query patterns to bring reports that took 30+ seconds or timed out down to consistently under 10 seconds.
- Moved long-running reports onto EventBridge, SQS and Lambda, with status and retries held in MySQL and failures monitored through CloudWatch. These reports no longer time out.
- Replaced manual deployments from shared Linux servers with isolated Cloudflare Pages previews and GitHub Actions. The four-person front-end team moved from deploying every few weeks to as often as several times a day, with unit and integration tests blocking normal releases.
- Built the Stripe payment flow that lets new advertisers test the platform before moving onto an IO and 30-day invoicing. It supports multiple currencies, with charge tracking, webhook reconciliation and no known missed or duplicate charges.
- Moved image resizing from the main ad servers to Lambda and Sharp, storing originals and variants in S3 and caching them through the CDN. Processing time roughly halved, and image failures no longer affect normal ad serving.
- Mentor two developers through pairing, code and design reviews, and contribute to engineering hiring through interviews and practical take-home exercises.

EARLIER EXPERIENCE

Operations Manager, Street Confit | Jul 2017 - May 2021 | London

Managed daily operations, suppliers, budgets and product development for a small food business, building practical experience in ownership, problem solving and team leadership.

General Manager and Supervisor, Hola Paella | Feb 2010 - Aug 2017 | London

Progressed through customer-facing and management roles, with responsibility for staff, daily operations, compliance, stock and new product development.
